
Products/Applications Color Measurement Online

Paper

Plastics

Coated Glass

Color measurement and Closed Loop Color Control for all paper and board types. The system can be installed on any machine, and easily connected to a DCS- system

Online Paper systems can be used to measure:

- Infinite layer color
- Opacity
- Whiteness, brightness

The color of Plastic films and plates can be measured in reflectance and/or in transmission.

Online Plastics systems can be used to measure:

- Color
- Whiteness, brightness

- Yellowness

- Haze

- Efficiency of the UV- layer

Glass pane can be measured directly on the machine at different positions on each pane.

The online reflectance and transmission measurements provide results about the color under different viewing angles. Effect layers like solar protection and low E glass can be controlled.
